

The bridgekeepers 3rd question

- First step was to check what the page do
- The page ask you 3 questions, and then write in the page “cast to the gorge”
- After that we try to inspect the page, once we did it there was a link for a you tube video
- The video tells the questions and the answers (we thought that)
- After some time trying the answers, we realized that the video was a fake clue, and there was something else in the source code, a “java script”.
- After understanding the code, we realized that we needed a string that each of the characters in UTF code – 97 will give us the position of the array that continues, in order to get the n, which have the string “blue” it was the answer for the 3 question (it was only one that matters).
